

For the first time in the firm's history, Starke & Sohn gave a presentation at a trade fair – HIVOLEC 2012 on 12 and 13 September – to a specialist audience.

At this regional exhibition in Rheinberg, a trade fair for specialists in and users of high-tension and medium-tension technology, a disproportionate number of visitors sought on-the-spot information at the stand of Starke & Sohn about

- Leading technologies for mobile transformer-oil regeneration (MRA technology),
- Recycling and material re-utilisation of used oils from transformers and turbines,
- Production and supply of transformer oils, and
- Specific possibilities of analyses of transformer oils.

As a highlight, visitors then and there were able to visit and inspect a mobile regeneration plant for transformer oils.

Dennis Weiss, deputy service manager at Starke & Sohn, was there to answer all detailed technical questions and, speaking to visitors from municipal utilities, distribution-network operators and industrial and service companies, gave an expert explanation of the plant and process technology of the MRA Pocket on exhibition.

In an accompanying talk, Dirk Flor, managing director of Starke & Sohn GmbH, discussed the principles and advantages of mobile transformer-oil regeneration during on-going transformer operation using MRA technology.
